I am a subscriber and great fan of XM radio. I spend a large amount of time in my car listening to XM radio, which makes the long commute to work and national road trips a pleasure. XM has recently added traffic and weather which I find invaluable on a daily basis. Whenever I need to make an instant decision concerning my drive and avoid major traffic delays I can instantly get that information when I need it on XM. Satellite radio has become a welcome service along with its music variety, news and sports. Don't spoil a good thing. XM Radio is a service that I pay for and it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear. Reject the NAB's petition 04-160.
